## **GOLDEN RETRIEVER**

**Distraction Index** 

**BREED STATISTICS:** This interpretation is based on a cross-section of 20749 canine patients of the GOLDEN RETRIEVER breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.33 - 0.80) for the breed. The breed average DI is 0.54 (solid square). The patient DI is the solid circle (0.48).

**SUMMARY:** The degree of laxity (DI = 0.48) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. No radiographic evidence of OA for either hip.
